

Responsibilities - iFood

What you will do:

- Understand our business model.
 - Work with *large* volumes of data.
 - Formulate and test hypothesis from business needs.
 - Properly communicate actionable insights from your analyses.
- You are an analytic-minded person with a strong bias towards action, delivering results quickly with iteration instead of waiting for perfection.
- You are an expert in data analysis and visualization tools, such as Tableau.
 - You are comfortable working with large data sets and big data technologies (Databricks, Spark, Python...) to be self sufficient in creating aggregated data sets for your analysis and dashboards.
 - You are proficient in manipulating large data sets with complex SQL and Python (or other similar languages).
 - You are able to multitask and work on multiple ongoing projects, with minimal oversight, documentation, and defined process.
 - You are an experienced data story-telling and have experience communicating to stakeholders at all levels of the business.
 - You have exceptional communication skills and can manage stakeholder priorities directly.

Requirements - iFood
